ON DELETE NO ACTION ON UPDATE CASCADE)
```

Triggers design & code

- Event: after insertion of a new user
- Condition: none
- Action: a new tuple having rejectedpurchases = 0 and solvent = true is added to userSalesReport

```
CREATE TRIGGER insert_userSalesReport
AFTER INSERT ON user
FOR EACH ROW
BEGIN
INSERT INTO userSalesReport(user, rejectedpurchases, solvent)
VALUES(NEW.username, 0, true);
END;
```

- Event: after insertion of a new pack
- Condition: none
- Action: a new tuple having purchasesop = 0, purchasesnoop = 0 and averageproduct = 0 is added to packSalesReport

```
CREATE TRIGGER insert_packSalesReport
AFTER INSERT ON pack
FOR EACH ROW
BEGIN
INSERT INTO packSalesReport(pack, purchasesop, purchasesnoop, averageproduct)
VALUES(NEW.id, 0, 0, 0);
END;
```

- Event: after insertion of a new optionalproduct
- Condition: none
- Action: a new tuple having amountsold = 0 is added to optionalproductSalesReport

```
CREATE TRIGGER insert_optionalproductSalesReport
AFTER INSERT ON optionalproduct
FOR EACH ROW
BEGIN
INSERT INTO optionalproductSalesReport(optionalproduct, amountsold)
VALUES(NEW.id, 0);
END;
```

- Event: after insertion of a new validityperiod
- Condition: none
- Action: a new tuple having quantity = 0 is added to validityperiodSalesReport

```
CREATE TRIGGER insert_validityperiodSalesReport
AFTER INSERT ON validityperiod
FOR EACH ROW
BEGIN
INSERT INTO validityperiodSalesReport(monthnumber, pack, quantity)
VALUES(NEW.monthnumber, NEW.pack, 0);
END;
```

- Event: after insertion of a new purchase
- Condition: none
- Action: increase by one both purchasesnoop of packSalesReport and quantity of the validityperiodSalesReport

```
CREATE TRIGGER number_of_purchasesnoop

AFTER INSERT ON purchase

FOR EACH ROW

BEGIN

UPDATE packSalesReport

SET purchasesnoop = purchasesnoop+1

```

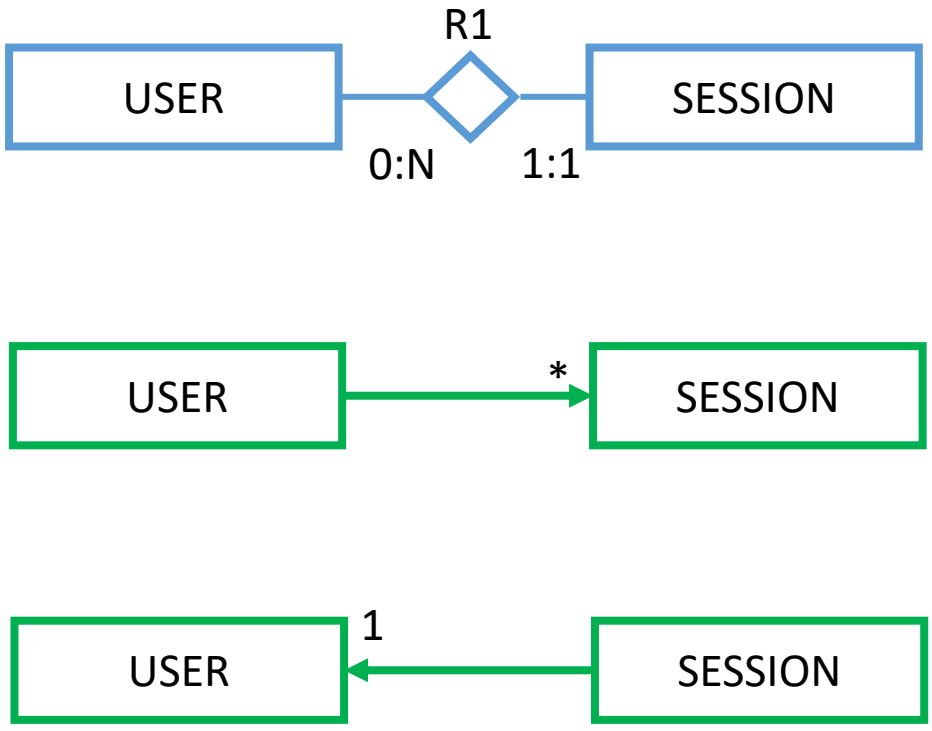
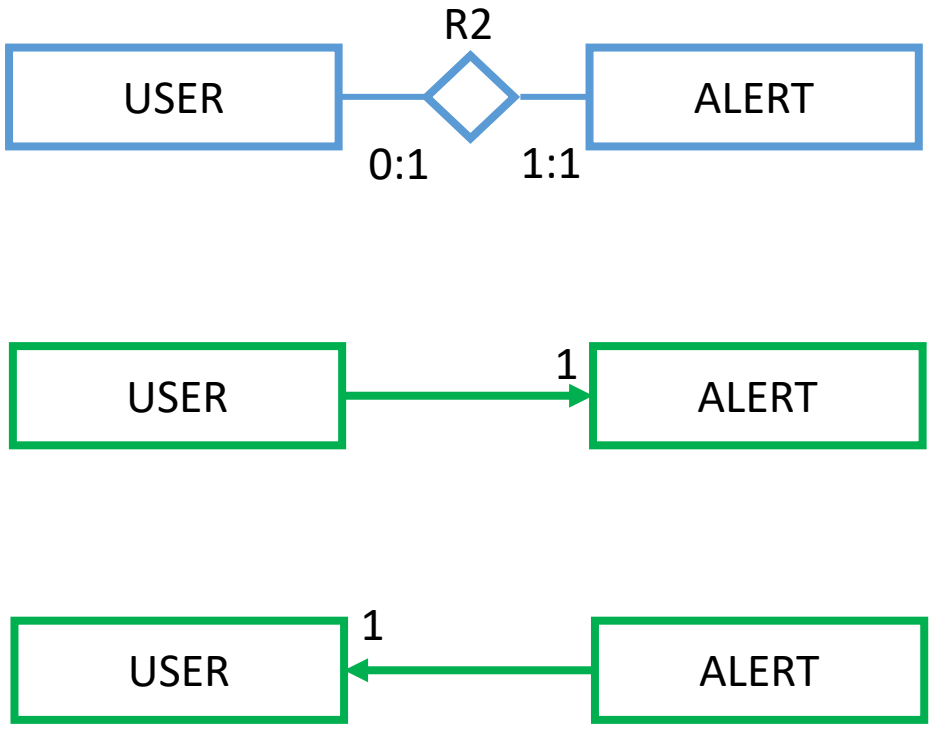
ORM design

Relationship “R1”



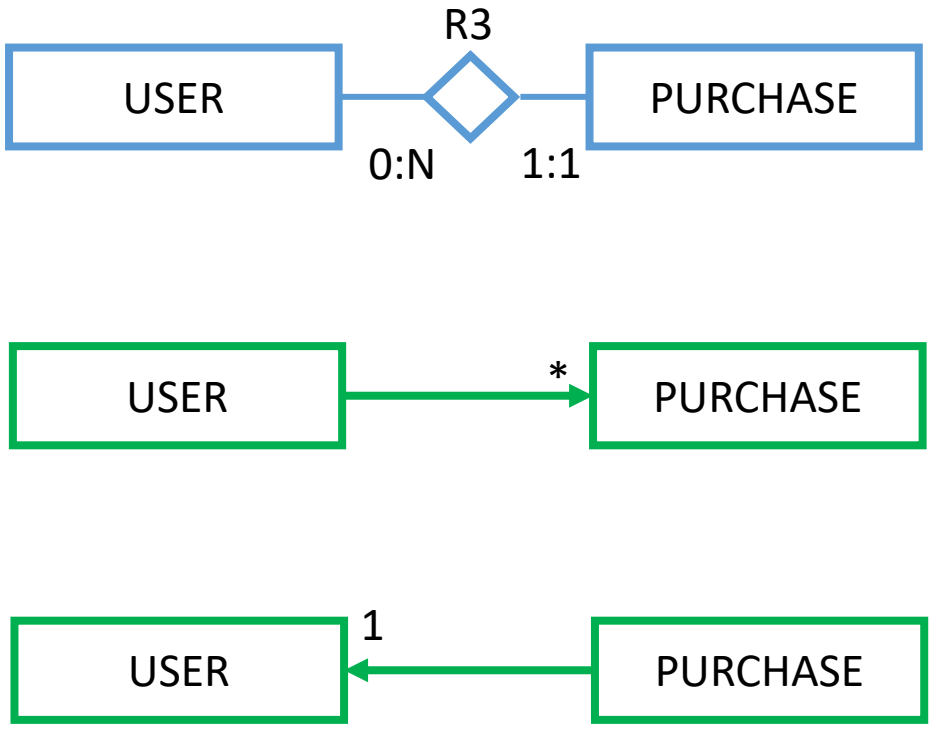
- USER → SESSION @OneToMany is necessary to get the sessions associated to the user
  - Owner = session
  - Cascade Type = Persist
- SESSION → USER @ManyToOne is mapped for simplicity as well

Relationship “R2”



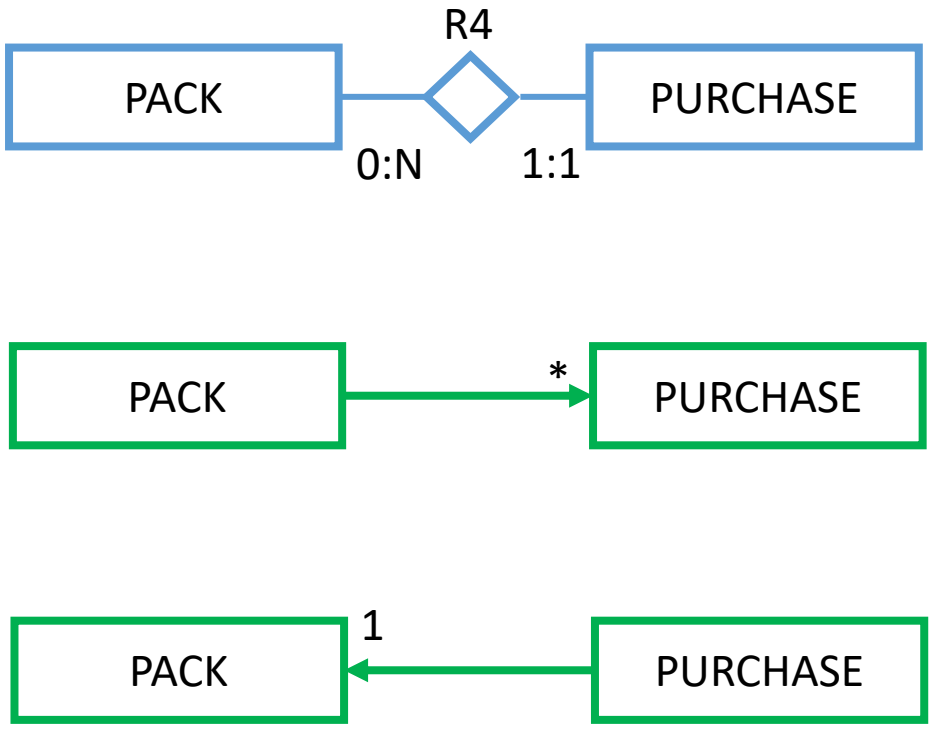
- USER → ALERT
  @OneToOne is necessary to get the alerts associated to the user
  - Owner = either alert or user
  - Cascade Type = Persist
- ALERT → USER
  @OneToOne is mapped for simplicity as well

Relationship “R3”



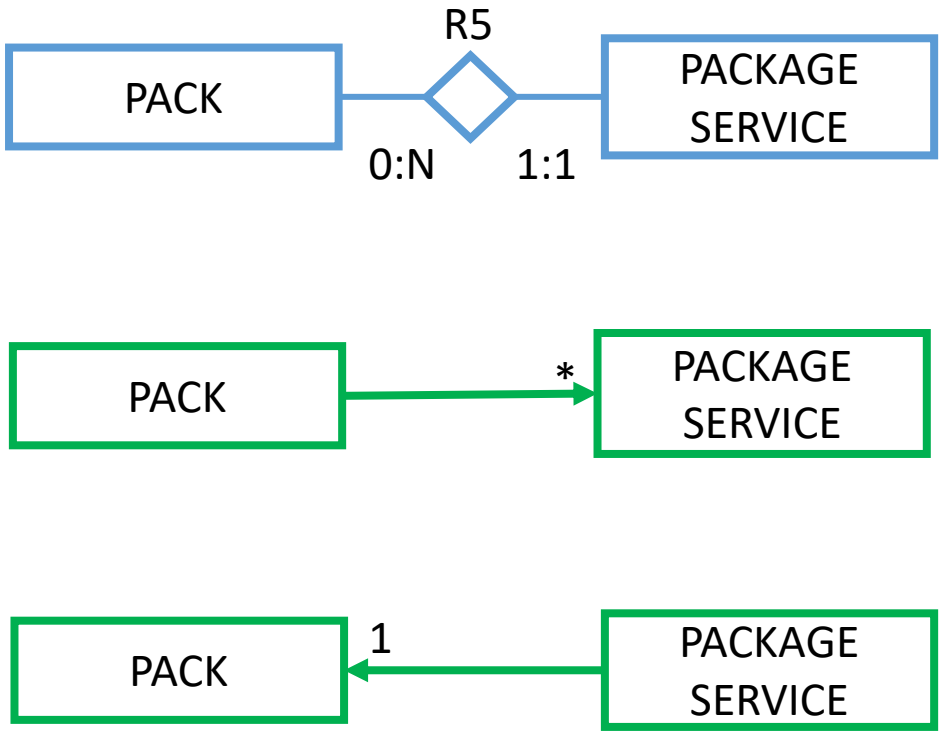
- USER → PURCHASE @OneToMany is necessary to get the purchases associated to the user
  - Owner = purchase
  - Cascade Type = Persist
- PURCHASE → USER @ManyToOne is mapped for simplicity as well

Relationship “R4”



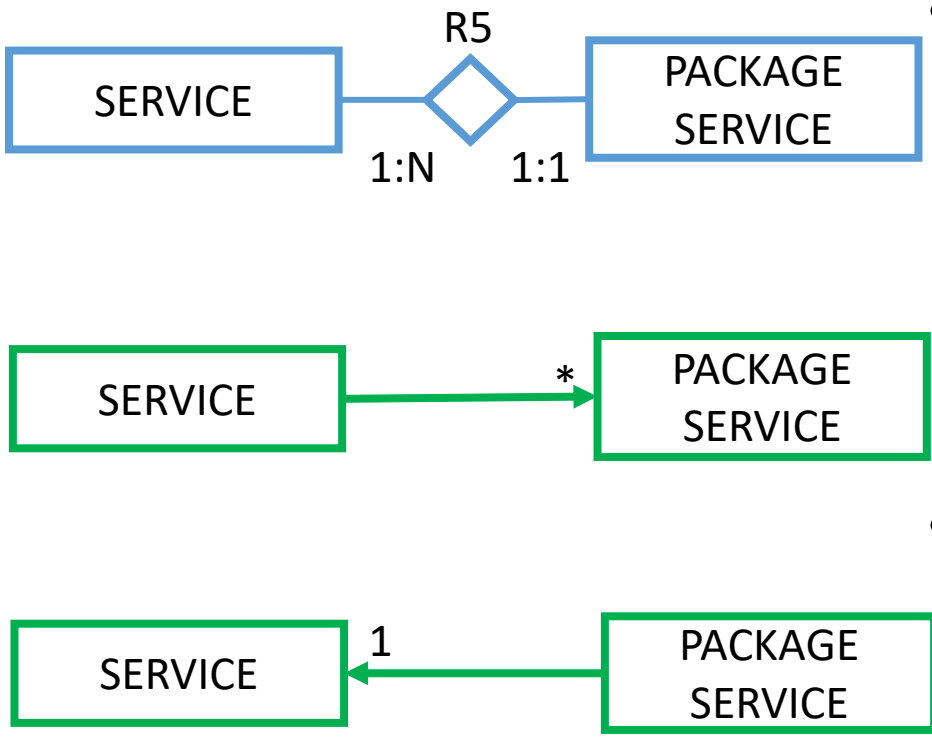
- PACK → PURCHASE @OneToMany is necessary to get the purchases associated to the pack
  - Owner = purchase
  - Cascade Type = Persist
- PURCHASE → PACK @ManyToOne is mapped for simplicity as well

Relationship “R5”



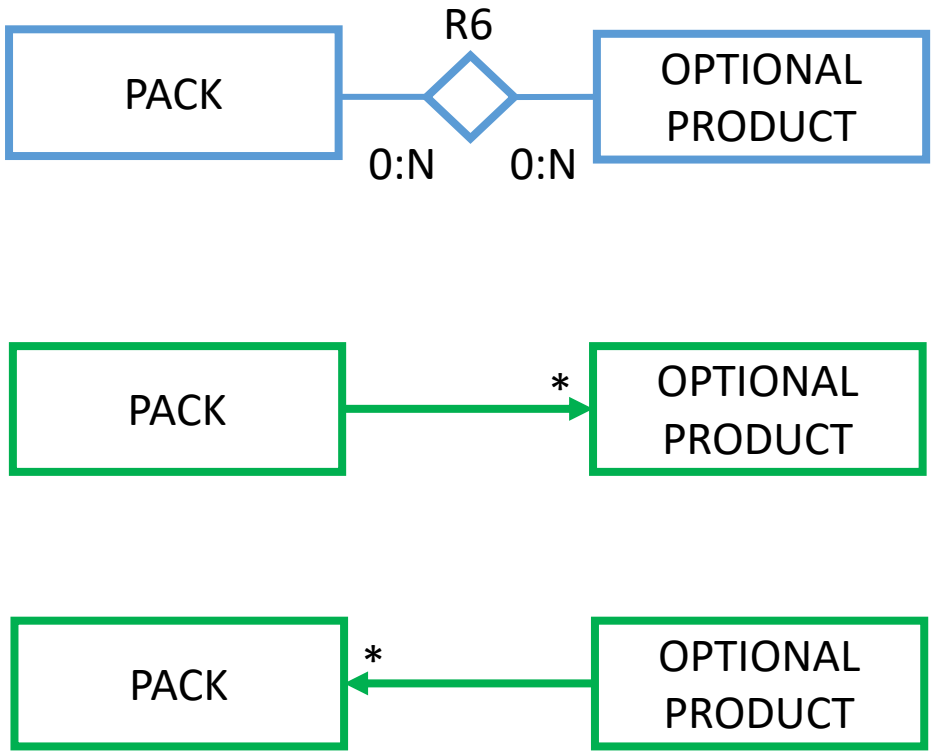
- PACK → PACKAGE SERVICE @OneToMany is necessary to show the package services assigned to each pack
  - Owner = package service
  - Cascade Type = Persist
- PACKAGE SERVICE →PACK @ManyToOne is mapped for simplicity as well

Relationship “R5”



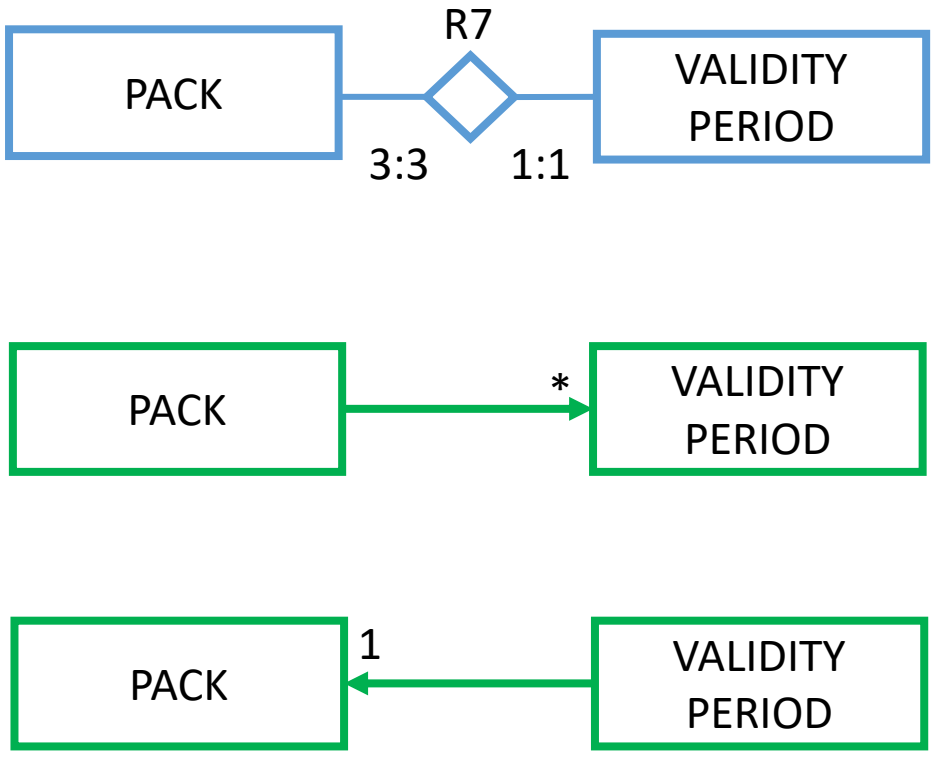
- SERVICE → PACKAGE SERVICE @OneToMany is necessary to show the package services assigned to each service
  - Owner = package service
  - Cascade Type = Persist
- PACKAGE SERVICE →SERVICE @ManyToOne is mapped for simplicity as well

Relationship “R6”



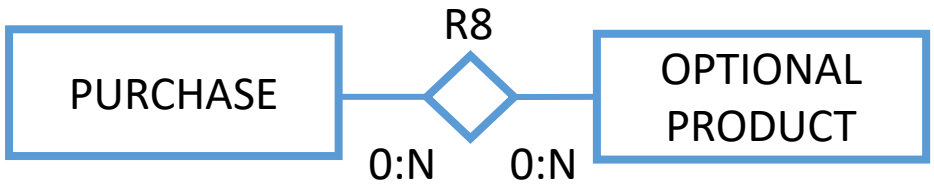
- PACK → OP. PRODUCT @ManyToMany is necessary to show the optional products assigned to each pack
  - Owner = either pack or optional product
  - Cascade Type = Persist
- OP. PRODUCT → PACK @ManyToMany is mapped for simplicity as well

Relationship “R7”



- PACK → V. PERIOD @OneToMany is necessary to get the validity periods associated to each pack
  - Owner = validity period
  - Cascade Type = Persist
- V. PERIOD → PACK @ManyToOne is mapped for simplicity as well

Relationship “R8”



- PURCHASE → OP. PRODUCT @ManyToMany is necessary to show the products associated to each purchase
  - Owner = either purchase or optional product
  - Cascade Type = Persist
- OP. PRODUCT → PURCHASE @ManyToMany is mapped for simplicity as well
